DETAILED ACTION

Response to Amendment

1. Applicant's amendment filed October 8, 2003, in which new Claims 5-6 have been added, has been placed of record in the file as Paper No. 100803.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Fukunaga (U.S. Patent No. 5,669,780). With regard to Claims 1, 3 and 5, Fukunaga discloses socket comprising a socket body (1), a plurality of contact pins (13) disposed on the socket body (1), a rest face (upper face of (1)), a pair of resilient pieces (13e, 13d) having contact portions (tips of (13e, 13d)), two slide plates (12) sliding in different directions by applying a pressing force (Figs. 16-18), and an upper operating member (7) applying and releasing the pressing force (Figs. 16-18) thereby increasing and decreasing the resilient deformation of the resilient pieces (13e, 13d). See Figs. 16-18.

With regard to Claim 2, Fukunaga discloses pressing members (9), which are formed between the two slide plates (12) and interposed between the pair of resilient pieces (13e, 13d). See Figs. 16-18.

With regard to Claim 4, Fukunaga discloses an X shaped lever member (9) being provided between the upper operating member (7) and the two slide plates (12) whereby urging motion of the operating member (7) is transmitted to the two slide plates (12). See Figs. 16-18.

Allowable Subject Matter

4. Claim 6 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The references fail to teach, disclose, or suggest, either alone or in combination, the upper operating member being coupled to the two side plates by means of a pair of lever members forming an X-shaped link mechanism and in combination with the rest of the limitations of the base claim.

Response to Arguments

5. Applicant's arguments filed October 8, 2003 have been fully considered but they are not persuasive. In response to Applicant's argument regarding Claims 1, 3 and 5,

that the Fukunaga reference does not show two slide plates, Applicant's attention is directed to Fig. 16 in which Fukunaga clearly discloses the two slide plates (2).

Furthermore, Applicant's attention is directed to Column 6, lines 34-67 in which Fukunaga clearly states the both members (12) are formed from plate material, slide and work exactly the same way as Applicant's plates.

Conclusion

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
